Figure 34.1. Exanthematous morbilliform eruption consisting of erythematous macules and papules of the trunk.

Figure 34.2. Urticaria with oedematous papules and plaques, which generally last a few hours.

Figure 34.3. Bullous eruption of the arm corresponding to a phototoxic eruption on a sun-exposed area.

Figure 34.4. Cutaneous necrotizing vasculitis, consisting of purpuric papules, which predominate on the lower extremities.

Figure 34.5. Acute generalized exanthematous pustulosis.
Figure 34.6. DRESS syndrome presenting as exfoliative dermatitis.

Figure 34.7. Fixed drug eruption, characterized by round, sharply demarcated erythematous plaques.

Figure 34.8. Drug-induced pemphigus with erosions of mucous membrane.

Figure 34.9. Toxic epidermal necrolysis characterized by skin necrosis, with flaccid blisters and epidermal detachment on the trunk.
