a
Abutment:
  actions 75
  analysis and design criteria 444–446
  anchored abutments 448–449
  front and wing walls design 446–447
  overall stability 445
  typologies and functions 241–245

Acceleration:
  action 73, 77–78
  comfort 370
  horizontal deck 370–372
  peak ground 122
  seismic 119, 121
  spectral 123–124, 424
  vertical deck 323, 368, 370, 372

Actions:
  abutment actions 75
  accidental loads 63, 124
  braking and acceleration 72, 75, 77–78
  centrifugal forces 73, 74, 78
  creep, shrinkage and relaxation 109–117
  dead load 65
  differential settlements 117–119
  during construction 125
  dynamic loads 79–84
  earth pressure 75, 78, 444, 445
  footways and cycle tracks 74–75
  friction in bridge bearings 119
  hydrodynamic actions 98–99
  imposed deformations 118
  Pedestrian parapets 75
  prestressing 327–329
  superimposed dead loads 65–66
  thermal actions 99–109
  traffic vertical loading, highway 68–72
  traffic vertical loading, railway 76–77
  walkways for maintenance 78
  wind actions 84–98
  seismic actions 121–124
  Aerodynamic coefficients 89
  Aerodynamic instability:
    divergent amplitude 95–98
    flutter 96
    vortex shedding 94
  Aesthetics:
    formal aspects 256
    colours, shadows and detailing 268–272
    order and continuity 260–262
    piers 267–268
    shape and function 258–260
    slenderness and transparency 262–266
    symmetries and asymmetries 266–267
    Urban bridges 272–277
  Alignment, bridge:
    vertical and horizontal 38–46
    transverse 46–49
  Balanced cantilever method 212–221
  Behaviour factor 124
  Beam on elastic foundation 29, 412
  Bearings:
    concrete hinges 439–441
    elastomeric bearings 430–433
    neoprene-teflon bearings 434–435
Bearsings (cont’d)
  pot bearings  435–437
  rolled metal bearings  437–439
  spherical metal bearings  438
Bimoment  338–340
Bowstring arch, bridge:
  analysis  403–404
  conceptual design  9–11
  geometry  396–401
  hangers and anchorages  402–403
  slenderness  397
  stability  399–401
Bracings–deck:
  analysis and design  394–395
  horizontal system  191–192
  vertical system  179, 188–191
Buckling:
  cable-stayed bridge  413
  load  233, 399, 449–450, 453
  local buckling  183
  lateral buckling  190–191
  flange induced  186, 385–386
  post-buckling  184
  rigid end posts  385
  shear  185, 384–386
  stiffened panel  196–197, 391–394
  torsional  412
  web breathing  186, 377
  web patch loading  185, 387–389
C
Cable stayed bridges:
  analysis and design  408–410, 416–417
  aerodynamic stability  413
  cables and anchors  402, 414–416
  conceptual design  9–13, 404–407
  deck construction  227
  deck cross-section  412
  deck stability  412
  longitudinal schemes  404–406
  mast and towers  404–405
  stay cables arrangements  12, 407
Camber, deck precamber  237, 366, 377, 410
Cantilever constructed bridges:
  camber  237
  conceptual design  212–216
  piers design  233–237
  precasted segments  221–222
  prestress tendons layout  216
  temporary stability system  237
  piers safety check  237–239
Centrifugal force  73, 74, 77–78
Charpy test  167
Circular frequency  79–80
Cofferdams  250
Cold form stiffeners  179
Collision loads  124
Columns see also Piers:
  bending stiffness  452
  buckling length and load  449–450, 453
  design criteria  364
  differential equation  454–455
  imposed deformations  116
  pre-design  232–233
  second order analysis  454–456
  slenderness  449
  ultimate resistance  459–460
Combination of loads  63–64
Concrete:
  material proprieties  139–140
  stress-stain diagram  141
  tensile strength and cracking  140
Construction methods, deck:
  balanced cantilever  212–221
  formwork launching girder  206
  incremental launching  206–212
  heavy lifting  223, 227
  precasted girder elements  221
  scaffoldings and falsework  203–206
  steel and composite decks  223–226
Corrosion, protection:
  prestressing  140–142
  stay cables  414
  steel structures  172–173
Cost-effective  258
Cracking, concrete:
  control  365
  effects  450
Creep:
  coefficient  116
  function  113
  notional size  110
Critical load see Buckling load
Curvature:
  bending curvature 289
  moment-curvature relationships 373–374, 459–460
  shrinkage curvature 111
  torsion curvature 339
Curved girder deck 350–355

Damping coefficient 77, 96, 371

Data, bridge:
  geological and geotechnical 35
  hydraulic 36–38
  topographic 32–35

Deck cross-section:
  box girder 192–202
  concrete slab 140, 174–176
  orthotropic plates 176–179
  plate girders 179–192
  precasted slab-girder 152–155
  ribbed slab 144–152
  slab-girder 144–152, 173
  voided slab 143

Deck–equipments:
  drainage system 54–55
  fascia beams 53–54
  handrails 50–53
  lighting system 55
  power traction system 61
  surfacing 50
  track system 59–60
  waterproofing 50

Dead load 65
Deck slab 173–176
Decompression limit state 299, 498, 501

Deformation, deflections limits:
  Pedestrian bridge decks 360–361
  highway bridge decks 368–369, 377
  railway bridge deck 372, 377
Degree of freedom 79, 120, 123

Depth, deck:
  apparent 265, 271
  cross-section 145–146, 157, 183
  equivalent depth 324

Design:
  actions 59–121
  conceptual design 125, 129–137
  constraints 32–49
  criteria 63, 125
  phases and methodology 31–32
  span distribution 131–134

Diaphragms:
  intermediate 160, 199
  support sections 159, 201, 326
Differential settlements 117–119
Distribution of wheel loads 70, 76–77, 285

Drainage:
  abutment 243, 446
  deck 54, 55, 476
Ductility 119, 124, 366
Durability 55, 154, 172, 176, 364
Dynamic analysis 82, 322, 369
Dynamic coefficient 79, 84

Earth pressure 75, 78, 444, 445
Eccentricity of the load 77, 309
Economical range of spans 144
Effective length 450
Effective width 182–183, 283–286, 384, 394, 519–522
Efficiency parameter, deck 146
Eigenvalues 322, 470
Elastic restraint of deck slabs 295–297
Elastic theory 289, 391
Equation of motion 121
Equilibrium equation:
  columns 454–455
  curved girders 350, 351
  dynamic 322
  plates 322
  rigid frame 305
  slabs 320
Excavation, foundations 245
Expansion joints:
  design and detailing 55
  rail expansion joint 134
  types 56
Exposure factor, wind 87–88
External prestressing 160, 238, 367

Falsework 203–206
Fan and semi-fan stays arrangement 12, 404
