## Index

**a**  
across-subject generalization, 142  
action potential, 27, 85, 135  
adverse effects, 112  
analog communication, 94  
analytic random predictor, 241  
animal models, 20, 47, 166  
anisotropy, 57  
ANN, 131  
aprerior nucleus, 309  
anti-convulsive medication, 12  
antiepileptic drugs, 265, 299  
anxiety, 4  
Artificial Neural Networks, 131  
aura, 14, 299  
average shortest path length, 202  
avoidance behavior, 6  
axonal recording, 91

**b**  
balance, 85  
basket cells, 158  
Belousov–Zhabotinskii reactions, 135  
bicuculline, 165  
bifurcation analysis, 39  
bifurcation control, 39  
binomial distribution, 243  
bivariate, 189  
bivariate measure, 18, 249  
bootstrap, 244  
bootstrap techniques, 19, 244  
brain dynamics, 47  
bursting neurons, 32

**c**  
Ca\(^{2+}\) imaging, 153  
CA1, 51  
CA3, 55  
caged compound, 277  
cell membrane, 153  
cellular neural networks, 131, 117  
centromedian nucleus, 308  
Chapman–Kolmogorov equation, 178, 179  
circadian rhythms, 18  
clinical results, 309  
closed loop  
−intervention, 11, 12  
−stimulation, 320  
−system, 300  
clustering coefficient, 202  
CNN, 117, 131  
CNN Universal Machine, 133  
cognitive impairment, 7  
computational neuroscience, 27  
connectivity, 47  
continuous long-term data, 15  
continuous recordings, 263  
cooling, 269  
coping, 5  
correlation dimension, 126  
cortical, 307  
−column, 37  
−slices, 86  
counter stimulation, 320

**d**  
data annotation, 263  
data storage, 261  
DBS, see deep brain stimulation 307  
deep brain stimulation, 307, 321  
dentate gyrus, 36, 58  
depolarization, 86, 150  
depression, 4  
determinism, 175, 177

---

Seizure Prediction in Epilepsy. Edited by Björn Schelter, Jens Timmer and Andreas Schulze-Bonhage  
Copyright © 2008 WILEY-VCH Verlag GmbH & Co. KGaA, Weinheim  
ISBN: 978-3-527-40756-9
Index

differential evolution, 123
diffusion, 175
diffusion imaging, 57
digital communication, 94
dimension approximation, 126
dorsomedial nucleus, 308
Down state, 86
drift, 175
driver-responder-relationships, 140
dynamical behavior, 117
dynamical similarity index, 227
dimension approximation, 126
dorsomedial nucleus, 308
Down state, 86

e
ECOG, 110
EEG, 307
EEG database, 261
electrical stimulation, 12, 109, 227, 320
electrode grid, 113
entropy, 194
epilepsy
−intractable, 307
−mesial temporal lobe, 313
−refactory, 283
−surgery, 170, 283
epileptic focus, 169
epileptiform activity, 91
epileptogenic area, 14
European database project, 266
evolution map approach, 191
excitable media, 132
excitatory conductance, 88

f
false prediction rate, 253
fast ripples, 166, 170
FitzHugh–Nagumo oscillators, 137
focal epilepsy, 14
focus lateralization, 183
focus localization, 176, 183
Fokker–Planck equation, 175, 177
functional connectivity, 114

G
GABA, 151, 269
gaussian orthogonal ensemble, 200
generalized synchronization, 39, 138, 192
glia, 163
glia cells, 33
glia-neuronal network, 164
Granger Causality, 48
graph theory, 34

h
hardware implementation, 131
−realization, 117
helplessness, 6
high-dimensionality, 175
high frequency oscillations, 14, 159, 169
high frequency ripples, 159
hippocampal stimulation, 284
hippocampus, 31, 36, 47, 150
hubs, 35
hyperexcitability, 36
hypersynchronous onset, 164
hypothermia, 271

i
ictogenesis, 166, 169
immobility, 7
information theory, 194
inhibitory
−conductance, 88
−interneuron, 85
−surround theory, 149, 150, 152, 157, 158
interaural time differences, 137
interictal
−activity, 120
−spike, 164
−state, 183
intermittency, 39
intervention time, 228
intracranial EEG, 12, 175, 176, 178, 227, 231, 318
ion channels, 28
isolation, 6

k
kainic acid, 165
Kramers–Moyal coefficients, 177, 180
Kramers–Moyal expansion, 177
Kullback–Leibler entropy, 194

l
Langevin equation, 176
LED, 269
light emitting diode, 269
limbic epilepsy, 54
linear dynamical systems, 18
linear measure, 249
linear response theory, 38
locus of control, 4
long-range connections, 35
long-term
−data, 261
–recordings, 125, 231
–video-EEG monitoring, 12, 317
low mobility, 7
low voltage fast onset, 164
lower critical value, 244

m
mammalian cochlea, 136
Markov process, 178
–properties, 178, 179
mean phase coherence, 140, 191, 227
measure profile, 238
measure profile surrogates, 246
medial temporal lobe epilepsy, 198
metadata, 262
microelectrode, 50
model parameter identification, 39
modeling, 117
modeling tools
–GENESIS, 30
–NEURON, 30
models
–canonical models, 29
–compartmental models, 31
–comprehensive models, 30
–EEG models, 37
–empirical models, 30
–Hodgkin–Huxley model, 28, 30
–lumped parameter models, 39
–multi-column models, 39
–neural mass models, 37
MRI, 52
multivariate, 189
–measure, 18
–time series analysis, 199
mutual information, 194

n
nearest-neighbor distribution, 199
neocortical epilepsy, 195
network characteristics
–clustering coefficient, 34
–degree distribution, 34
–highest betweenness centrality, 35
–mean degree, 34
–mean path length, 35
network theory, 202
–topology, 34
neural networks, 33
neuronal
–clusters, 166
–networks, 164
–synchronization, 109

neurons, 163
neurostimulation, 283, 299, 307
noise, 38, 175, 176
nonlinearity, 175, 182
nonlinear
–characteristics, 121
–dynamical systems, 18
–interdependence, 140, 192
–measure, 249
number variance, 199

o
occurrence period, 13
