Aims and Scope

Energy Science & Engineering is a peer reviewed, open access journal dedicated to fundamental and applied research on energy and supply and use. Published as a co-operative venture of Wiley and SCI (Society of Chemical Industry), the journal offers authors a fast route to publication and the ability to share their research with the widest possible audience of scientists, professionals and other interested people across the globe. Securing an affordable and low carbon energy supply is a critical challenge of the 21st century and the solutions will require collaboration between scientists and engineers worldwide. This new journal aims to facilitate collaboration and spark innovation in energy research and development. Due to the importance of this topic to society and economic development the journal will give priority to quality research papers that are accessible to a broad readership and discuss sustainable, state-of-the art approaches to shaping the future of energy. This multidisciplinary journal will appeal to all researchers and professionals working in any area of energy in academia, industry or government, including scientists, engineers, consultants, policy-makers, government officials, economists and corporate organisations.

Energy Science & Engineering features a broad range of article types including Original Research Articles, Reviews, Modeling and Analysis articles, Short Communications and editorials as well as commentary and case study article types such as Perspective, Spotlight, In the Field and On the Map.

Energy Science & Engineering publishes papers submitted directly to the journal and those referred from a select group of prestigious journals published by Wiley-Blackwell. Energy Science & Engineering is a Wiley Open Access journal, one of a new series of peer reviewed titles publishing quality research with speed and efficiency. For further information visit the Wiley Open Access website at http://www.wileyopenaccess.com

Open Access and Copyright

All articles published by Energy Science & Engineering are fully open access: immediately freely available to read, download and share. All Energy Science & Engineering articles are published under the terms of the Creative Commons Attribution License which permits use, distribution and reproduction in any medium, provided the original work is properly cited. Copyright on any research article in a journal published by Energy Science & Engineering is retained by the author(s). Authors grant Wiley a license to publish the article and identify itself as the original publisher. Authors also grant any third party the right to use the article freely as long as its integrity is maintained and its original authors, citation details and publisher are identified. Further information about open access license and copyright can be found at http://www.wileyopenaccess.com/details/content/12f25db4c87/Copyright-Licenses.html.
