Correction

Gene expression response of mouse lung, liver and white adipose tissue to β-carotene supplementation, knockout of Bcmo1 and sex

Yvonne G. J. van Helden, Roger W. L. Godschalk, Johannes vonLintig,

Georg Lietz, Jean-Francois Landrier, M. Luisa Bonet, Frederik J. van Schooten, Jaap Keijer*

Table 1 and 2 as initially published contain the following error:

The total number of dietary beta-carotene-dependent differentially expressed genes in inguinal white adipose tissue (iWAT) of female Bcmo1−/− mice in Table 1 and Table 2 should be 600 rather than 1522. This correction has no effect on the other numbers nor on the conclusions of the paper.

The authors apologize for any inconvenience or misunderstanding that this error may have caused.
