Seed-dispersal networks in tropical forest fragments
Association for Tropical Biology and Conservation Officers

Past President: *Kaoru Kitajima*, Tropical Forest Resources and Environments, Kyoto University, Japan.
President Elect: *Yadwinder Malhi*, School of Geography and the Environment, University of Oxford, UK.
Executive Director: *Robin L. Chazdon*, Department of Ecology and Evolutionary Biology, University of Connecticut, USA.
Treasurer: *Patricia Sampaio*, Tropical Conservation and Development Program, Gainesville, USA.
Secretary: *Julieta Benítez-Malvido*, Instituto de Investigaciones en Ecosistemas Y Sustentabilidad, Universidad Nacional Autónoma de México, Mexico.

Councillors: 3rd Year: *Ahimsa Campos-Arceiz*, University of Nottingham, UK. *Saara DeWalt*, Clemson University, USA.

Information for Contributors to BIOTROPICA (See also ATBC Web site: www.tropicalbio.org)

General information
Manuscripts for consideration in BIOTROPICA may cover any aspect of tropical biology and conservation. Articles must be of general interest to the global community of tropical biologists, with contents of lasting value and significance. Preference will be given to papers devoted to the presentation and discussion of original research and ideas or to those papers containing significant review, synthetic, and interpretive qualities.

BIOTROPICA offers four publication categories: Original Article, Commentary, Insights, and Review. Preference will be given to papers devoted to the presentation and discussion of original research or thinking that either:

1. address clearly identified ecological concepts or conservation challenges (Original Article, up to 5,000 words);
2. provide an authoritative opinion on current issues in ecology or conservation, or a thought-provoking commentary on a previously published paper (Commentary, up to 2,000 words);
3. describe a concise empirical study that represents a particularly interesting or original development in the field (Insights, up to 2,000 words);
4. contain significant review, synthetic, and interpretive qualities (Review, up to 8,000 words).

Word counts exclude title page, abstract(s), literature cited, tables, figures, or appendices. Special Sections and Special Issues are also published through special arrangements with the Editor-in-Chief.

Page charges
BIOTROPICA allows free published pages (max. 10 pages) for first authors who are members of the Association for Tropical Biology and Conservation, although voluntary contributions are most welcome. Page processing charges ($100) will be waived for first authors from developing countries, as defined by the World Bank, when they have no funds to support these costs. Contact the Editorial Office (office@biotropica.org) to determine eligibility. Papers published as part of a Special Section always incur page charges and the above-mentioned exemptions do not apply.

Manuscript submission
Online submission and review of manuscripts is mandatory. When your manuscript has been prepared in accordance with the pre-publication checklist (http://www.tropicalbio.org/) and you are ready to submit, please go to http://mc.manuscriptcentral.com/bitr. Please follow the instructions for creating your user account and for submitting your manuscript and cover letter. Authors may suggest reviewers and subject editors when you submit. Online help is provided with the *Manuscript Central™ Online User Guide*, which can be downloaded from this web site. If you are unable to submit your manuscript though this website, please contact the Biotropica Editorial Office for assistance (office@biotropica.org).

Preparation of Manuscript
For details on manuscript form and style, please refer to the prepublication checklist (http://www.tropicalbio.org/) and to a recent issue of BIOTROPICA. English abstracts are required for all papers except for commentaries (250 word limit for original articles and reviews and 75 word limit for insights). Authors are strongly encouraged to provide a second abstract in the language of the country in which the research was conducted for publication as Supplemental Online Material on Blackwell's website.

Authors whose native language is not English
Our goal is to publish the very best papers in tropical ecology, regardless of the authors’ native language. To this end reviewers are asked to judge the quality of a manuscript based on its science, and not on language. Nevertheless, a manuscript that is clearly written in good English is easier to understand, and is likely to receive a more sympathetic review. Authors should therefore make every effort to ensure that the English is of good quality. Our advice is that authors requiring English language assistance should enlist the help of a native speaker or a colleague in the first instance. Biotropica does offer an English copy editing service.

This paper meets the requirements of ANSI/NISO Z39.48-1992 (Permanence of Paper).
**Biotropica** Volume 52  Number 1

Cover photography: A Channel-billed toucan (Ramphastos vitellinus) regurgitating seeds of juçara palm (Euterpe edulis) in the Atlantic Forest of Brazil. The remnant species performing seed-dispersal interactions are shaping the network-area relationship in tropical fragmented landscapes. See article on page 81 (Photo credit: Pedro Jordano).

### Contents

**Insights**

5  **Bats use live fences to move between tropical dry forest remnants**  
José G. Martínez-Fonseca, Marlon Chávez-Velásquez, Kimberly Williams-Guillen and Carol L. Chambers

**Original Articles**

11  **Altitude and species identity drive leaf litter decomposition rates of ten species on a 2950 m altitudinal gradient in Neotropical rain forests**  
Jimena Esquivel, Byung Bae Park, Fernando Casanoves, Diego Delgado, Co-Eun Park and Bryan Finegan

22  **Litter dynamics recover faster than arthropod biodiversity during tropical forest succession**  
Rebecca J. Cole, Paul Selmants, Shafkat Khan and Robin Chazdon

34  **Islands in a green ocean: Spatially structured endemism in Amazonian white-sand vegetation**  
Flavio M. Costa, Mario H. Terra-Araujo, Charles E. Zartman, Cintia Cornelius, Fernanda A. Carvalho, Michael J. C. Hopkins, Pedro L. Viana, Eduardo M. B. Prata and Alberto Vicentini

46  **Differences in epiphyte biomass and community composition along landscape and within-crown spatial scales**  
Autumn A. Amici, Nalini M. Nadkarni, Cameron B. Williams and Sybil G. Gotsch

59  **Insects and light interact to mediate vine colonization of fast growing *Microberlinia bisulcata* tree seedlings in gaps of an African rain forest**  
Julian M. Norghauer

70  **Environmental correlates of leguminosae species richness in Mexico: Quantifying the contributions of energy and environmental seasonality**  
Maribel Arenas-Navarro, Oswaldo Téllez-Valdés, Gabriel López-Segoviano, Miguel Murguía-Romero and J. Sebastián Tello

81  **Seed dispersal networks in tropical forest fragments: Area effects, remnant species, and interaction diversity**  
Carine Emer, Pedro Jordano, Marco A. Pizo, Milton C. Ribeiro, Fernanda R. da Silva and Mauro Galetti

90  **Ant seed removal in a non-myrmecochorous Neotropical shrub: Implications for seed dispersal**  
Seanne R. Clemente and Susan R. Whitehead

101  **Numerically dominant species drive patterns in resource use along a vertical gradient in tropical ant assemblages**  
Stephanie J. Law and Catherine Parr

113  **Rain shadow effects predict population differences in thermal tolerance of leaf-cutting ant workers (*Atta cephalotes*)**  
Kaitlin M. Baudier and Sean O’Donnell
120  **Effects of land-use change on functional and taxonomic diversity of Neotropical bats**  
Fábio Z. Farneda, Christoph F. J. Meyer and Carlos E. V. Grelle

129  **Determinants of intra-annual population dynamics in a tropical soil arthropod**  
Pedro Aurélio Costa Lima Pequeno, Elizabeth Franklin and Roy A. Norton

139  **Environmental and spatial effects on coastal stream fishes in the Atlantic rain forest**  
Cristina da Silva Gonçalves, Robert Dan Holt, Mary C. Christman and Lilian Casatti

151  **Bird communities across varying landcover types in a Neotropical city**  
William Michael Hayes, Jessica Claris Fisher, Meshach Andres Pierre, Jake Emmerson Bicknell and Zoe Georgina Davies

165  **Vocal behavior of the Undulated Tinamou (Crypturellus undulatus) over an annual cycle in the Brazilian Pantanal: New ecological information**  
Cristian Pérez-Granados, Karl-L. Schuchmann and Marinez I. Marques

172  **Clothing color mediates lizard responses to humans in a tropical forest**  
Andrea Fondren, Lindsey Swierk and Breanna J. Putman

182  **Disentangling drivers of small mammal diversity in a highly fragmented forest system**  
Noe U. de la Sancha, Renan Maestri, Ricardo S. Bovendorp and Christopher L. Higgins

196  **Predicting indirect effects of transportation network expansion on Asian elephants: Implications for environmental impact assessments**  
Cheng Huang, Xueyou Li, Wenqiang Hu and Xuelong Jiang
