An update on the prevalence of cerebral palsy: a systematic review and meta-analysis

In this article by Oskoui et al.¹ there was an error in the abstract and results section. The pooled prevalence of CP per 1000 live births in children born under 28 weeks was given as 111.90, when it should have been 82.25. The authors apologise for the error.

Erratum
doi: 10.1111/dmcn.12344

In the article by Green et al.¹ there was an error in Fig. 2. The corrected figure is as below:

Various parts of the text were affected by this error, and the corrected text is as follows:

Abstract, Results, page 1: The affected hand was reported to be used in 72% of bimanual activities before the camp, progressing to 93% after camp, and decreasing to 86% at follow-up.

Results, Changes in daily task activity performance, page 5: Before the camp, 72% of the 18 activities performed independently

Discussion, page 6: By the end of the magic intervention programme, 93% of daily tasks were performed using a bimanual approach and maintained at 86% at 3 months later, compared with 72% before intervention.

Additionally, the SD in Table II Column 5 should be 13.0 (7.5) not 13.0 (17.5).

The authors apologise for the errors.
